

Nayara Gardens: turning the trust we have into the visibility we want

The whole plan in one place. What the data says, what Gardens will own, and the specific steps we are taking across every channel, with the work already moving on the site and on the organic side.

Team game plan · June 2026 · Live sources: Google Analytics, Search Console, Semrush, Instagram, Google Business Profile, the SynXis booking workbook. Companion to the SEO/AEO/GEO/EEAT brief.

| 4. What Gardens will own | 9. Status, sequence, and measurement |
| 5. Capturing all-inclusive demand, honestly | |

1. The opportunity

Gardens is not a failing property. It is a strong property that the machines describe wrongly. The demand and the trust already exist; the job is exposure.

ORGANIC, LAST 90 DAYS	TENTED	SPRINGS	GARDENS
Organic revenue	\$867,140	\$342,576	\$53,402
Organic visitors	~21,750	~19,390	~15,020

- **Gardens already has the audience:** 60.8% female, ages 25 to 44, US and UK driving ~95% of revenue. That is the family traveler. [GA4](#)
- **It already has world-class trust:** 4.9 stars on 1,070 reviews, the most-reviewed of the three properties, plus real rainforest experience.

BUSINESS PROFILE

- **It already gets the AI traffic:** roughly 1,500 AI-assistant sessions in 90 days, the fastest-growing channel. [GA4](#)
- **The gap is exposure, not quality.** Search Console (now connected) shows Gardens ranks number one for "best family resorts in costa rica" but earned one impression in 90 days. It is eligible and almost never shown.

SEARCH CONSOLE

The opportunity in one line: convert the trust Gardens already has into the visibility it does not. That is a far easier job than building demand from nothing, and it is the highest-leverage work in the portfolio.

2. Why we are here (briefly, and we all own it)

Two honest reasons, neither a failure: the property was renamed, so its history, reviews, and awards are not yet fully connected to "Nayara Gardens," and the family story was never exposed in the page structure, the markup, or the content the engines read. The result is that Google and the AI assistants default to describing Gardens as romance. This is a shared responsibility across the team, and it is fixable. The rest of this document is the fix, and a good deal of it is already underway.

3. The four layers: SEO, AEO, GEO, and EEAT

Search is four jobs now, and Gardens has a different problem in each. The companion brief covers this in full; here is where Gardens sits.

LAYER	THE WIN	GARDENS' SITUATION	THE FIX
SEO	Rank in the blue links	Strong on rainforest terms, near absent on family; few organic keywords	Family rainforest hub + content cluster
AEO	Be the answer box	No structured answers to "is it all inclusive / good for families"	FAQPage schema answering the real questions
GEO	Be named in the AI reply	AI narrates it as adults-only; omitted from family answers	Fix the entity across site, profile, Wikidata; get into the cited listicles
EEAT	Be believed	4.9 on 1,070 reviews and real experience, none exposed in markup	AggregateRating + award schema, named authors, real photos

The shared unlock: exposing the awards and reviews in schema is one low-effort action that lifts all four layers at once. It is the foundation everything else sits on, so we do it first.

4. What Gardens will own

Gardens should not sprawl. It should own the territory that reinforces family, and cede the rest cleanly to its siblings.

TERRITORY	WHY GARDENS OWNS IT	SIGNAL
Family (the spine)	The actual product and audience; white space no rival owns in Arenal	~4,500/mo
Rainforest / jungle resort	Already its only non-brand foothold (page 1 today); literally true	jungle resort 720 +
Arenal / La Fortuna dining	"Restaurants" is its #1 non-brand Maps search; no incumbent	3,543 Maps
Wildlife and nature	Gardens teem with flora and fauna; the family nature hook	experiential
The original, most-trusted Nayara	The first property, most-reviewed (4.9 / 1,070)	entity / EEAT

Where the sloths fit

The sloth origin and brand story belong to **Nayara Tented Camp**, where it began, and the sloths are **wild, natural rainforest animals, not a captive sanctuary or petting zoo**. That is the stronger, more luxury, more sustainable story (we restored the rainforest and the wild sloths stayed). Because the sloths are wild and roam the shared Arenal forest, **Gardens uses them cleverly for the family angle**: "wild sloths your kids can spot from the trails," a nature hook, never a claim to the origin story. Tented leads the sloth content and AI answer; Gardens borrows the wild-sloth wonder for families.

What Gardens does not chase: hot springs (that is Tabacon, and Gardens has no thermal springs), romance and honeymoon (that is Springs), and any value or entry-level framing. Ceding these cleanly is what keeps the family position sharp.

5. Capturing all-inclusive demand, honestly

"Costa Rica all inclusive" is a 49,500-a-month search we cannot rank for as an all-inclusive resort, because we are not one. Here is how we win it anyway, without arguing with the searcher.

The word "all-inclusive" is shorthand for four needs: predictable cost, no nickel-and-diming, food sorted, and activities included. We meet the need without the label, and we have an honest "yes" to offer:

- **The brand-level truth:** Costa Rica is breakfast plus experiences, but **Bocas del Toro, Alto Atacama, and Hangaroa are genuinely all-inclusive**. So "does Nayara have all-inclusive resorts?" is honestly yes, and we route the searcher accordingly.
- **The honest answer page (AEO):** lead with the plain answer ("Nayara Gardens is not all-inclusive; here is exactly what is included: daily breakfast, the rainforest and wildlife experiences, kids' programming"), then the value. FAQPage schema. Wins "is nayara gardens all inclusive," which already ranks, plus the La Fortuna all-inclusive searches already hitting us in Maps.
- **The honest guide (corporate):** a "Costa Rica all-inclusive resorts: an honest guide" page that fairly explains the landscape, positions Gardens as the family pick with transparent inclusions, and routes true all-inclusive seekers to Bocas and Atacama. This intercepts the big research volume without a false claim.
- **Never lecture.** Do not open with "unpackaged is better." Answer the question, meet the need, earn the upgrade.

Why it works: it is honest (which AEO and GEO reward), it monetizes a category we cannot enter as a resort by being the trusted guide, and it uses our real all-inclusive properties as the genuine yes.

6. The channel game plans, with the specific steps

Every channel, the concrete steps, the owner, and the status. This is the working plan.

6.1 The family rainforest landing page (the hub)

- 1 Reposition the page to family** in the title, H1, and meta ("Family Rainforest Resort near Arenal Volcano"), on a clean, migration-ready URL. **IN PROGRESS** Alex, web
- 2 Lead with the wild-sloth and wildlife hook for families**, then the family proof: suites that sleep four, guaranteed adjacent rooms, babysitting, on-call doctor, stroller-friendly paths, kids' programming. Verified claims only. **NEXT** content
- 3 Real family-stay photography only, no stock.** **NEXT** content
- 4 "Check availability" calls to action throughout**, and tighten the availability-to-confirmation step where the funnel currently leaks. **NEXT** web

6.2 Technical and EEAT exposure (the foundation that lifts all four layers)

- 1 Add Hotel / LodgingBusiness schema** with alternateName (the old names), sameAs (Wikidata, profile, social), and the award entities. **IN PROGRESS** Alex, web/SEO
- 2 Add AggregateRating schema** with the real numbers (4.9 / 1,070). **IN PROGRESS** Alex, web

- 3 **Add FAQPage schema** answering the real Search Console questions (family, inclusion, sloths). **IN PROGRESS** Alex, web
- 4 **Add named author bylines** with real expertise on Journal content. **NEXT** content

6.3 Organic SEO content cluster

- 1 **The family hub page** targets the family cluster (costa rica family resorts 1,600, best family resorts 1,300, for families 720). **NEXT** content
- 2 **Rainforest and dining support pages** capture the territory Gardens already half-owns (jungle resort 720, restaurants in arenal). **NEXT** content
- 3 **Corporate Arenal / La Fortuna page** targets "hotels in la fortuna costa rica" (3,600, low competition) and funnels to Gardens. **NEXT** content / web

6.4 AEO (answer boxes and voice)

- 1 **Answer the real questions verbatim** from Search Console ("is nayara gardens all inclusive," "is it good for families," "can you see sloths") in FAQ blocks with schema. **IN PROGRESS** Alex + content
- 2 **Concise, directly-phrased answers** at the top of each, so engines can lift them. **NEXT** content

6.5 GEO (being named in AI answers)

- 1 Fix the entity:** make "family rainforest resort" the consistent description across the site, Google Business Profile, and Wikidata/ Wikipedia, with the family fact explicit. **IN PROGRESS**
Alex (site) + Albert (Wikidata/listings)
- 2 Get into the sources AI cites:** the family round-ups (see 6.10). **IN PROGRESS** Albert, PR
- 3 Run the AEO/GEO scoreboard** before and after (see section 9). **NEXT** Albert / analytics

6.6 Google Business Profile (the fastest wins)

- 1 Name corrected to Nayara Gardens.** **DONE** Albert
- 2 Add the restaurant menus** to capture the number one non-brand search ("restaurants," 3,543 in 90 days). **NEXT** local / web
- 3 Enable the reservation link as "Check availability"** (Maps bookings are currently off). **NEXT** web
- 4 Optimize categories and family attributes, refresh real photos, post weekly, and answer the Q&A** with the family and inclusion questions; keep responding to reviews to hold 4.9 / 1,070. **NEXT**
local

6.7 Instagram (the robust plan)

Gardens is the weakest property account (17,282 followers, 90-day reach 35,947) but has the most bookable audience (75% female, 51%

US). Tented proves the model: visual differentiator content drives three to four times the reach (143,773). We apply that playbook.

- 1 **Reframe the profile around family and rainforest**, not generic luxury: bio, pinned content, and a "Check availability" link with tracking. NEXT social

- 2 **Five content pillars, Reels-first**: wild sloths and wildlife for families; family moments (suites sleep four, kids' programming, multi-generational); rainforest immersion; the restaurants; and guest stories. NEXT social / content

- 3 **Lead with Reels** (the reach engine), carousels for rooms and family proof, daily Stories with booking nudges, and organized Highlights (Family, Wildlife, Rooms, Dining, Spa). NEXT social

- 4 **Target US and UK bookers** in paid and organic, not broad reach; build lookalikes from actual bookers. NEXT social / paid

- 5 **Recruit family-travel micro-influencers** for hosted stays, with tracked links. NEXT social / PR

- 6 **Repurpose every Journal piece into Reels and carousels**; show wild sloths for families (origin credited to Tented). NEXT
social / content

- 7 **Measure reach, saves and shares (intent), profile-to-site taps, and assisted bookings**, against today's baseline, targeting Tented-level reach. NEXT social / analytics

6.8 The Journal (the robust plan)

Editorial supports the family hub and feeds AI citations; it is not the lead. Quality over volume, each piece pointing at the page that converts.

- 1 **Connect the Journal subdomain to Search Console** so we can see what ranks. **NEXT** analytics / SEO
- 2 **Publish a focused family and rainforest slate**, each linking into the family hub: Costa Rica with kids (the Arenal family guide); how to see wild sloths with kids in Arenal; getting to La Fortuna with children; multi-generational Costa Rica; a family food guide to Arenal dining; what staying in the rainforest is really like. **NEXT** content
- 3 **Build for credibility and AI citation:** a named author with real expertise, real photography, clear sourcing, an FAQ block per piece, and date stamps for freshness. **NEXT** content
- 4 **Cadence of two to three strong pieces a month**, not volume. **NEXT** content
- 5 **Later, fold the Journal into the main site as a folder** with page-by-page redirects, so its authority strengthens the commercial pages. **NEXT** dev / SEO

6.9 Paid search (Gardens)

- 1 **Fix the conversion-value tag** (it currently reports near zero, so bidding is blind). **IN PROGRESS** Alex / dev / Ads

- 2 **Retire or repurpose the off-strategy "Romance" campaign;** fund tracked non-brand family and Arenal campaigns once the tag is fixed, pointing at the family hub. **NEXT** paid
-

6.10 Listicles, PR, and AI sources

- 1 **Correct the old name across third-party sites** (arenal.net, visitcostarica.com, review pages calling Gardens a couples property). **IN PROGRESS** Albert, PR
 - 2 **Pitch Gardens into the family round-ups** that own and feed the AI answers (twoweeksincostarica, theeverymom, Oyster family, Scott Dunn, Costa Rica Experts, Black Tomato), plus the Mr & Mrs Smith gap. **NEXT** Albert, PR
 - 3 **Refresh the Conde Nast and Travel + Leisure inclusions** using the award relationships, with the family angle leading. **NEXT** Albert, PR
-

6.11 How the corporate site and Gardens work together

nayaragardens.com owns the Gardens-brand and family content (the hub lives here). nayararesorts.com runs the non-brand feeder pages (Best Luxury Resorts, the Arenal page, the all-inclusive guide) that funnel the right guest to Gardens. They cross-link cleanly, Gardens-brand stays off the corporate domain for now so the two do not compete on the name, and fixing cross-domain tracking makes the corporate and social effort provable. Full consolidation is a later project, gated behind the tag fixes.

7. Who is doing what

On the site (Alex)

- Page FAQ, structure, and the family hub build
- Hotel, FAQ, and AggregateRating schema with the awards and reviews
- Family-led title, H1, and metadata
- The conversion-tag and tracking fixes, with dev

Organic and off-site (Albert)

- The positioning and the strategy
- Old-name corrections across listings
- The entity work (Wikidata, profile, consistency)
- Listicle and family round-up outreach; awards refresh
- Google Business Profile, Instagram, and Journal direction

Shared: the family content, and the AEO/GEO scoreboard that proves it worked.

8. Why this is a strong strategy

- **It converts strength we already have.** The trust, the reviews, the awards, and the AI traffic exist; we are exposing them, which is far cheaper and faster than building demand.
- **It targets winnable ground.** Family, rainforest, and dining in Arenal are white space no competitor owns, not the unwinnable head terms.
- **One foundation lifts everything.** The EEAT schema work pays into SEO, AEO, GEO, and trust at the same time.
- **It is coordinated and already moving,** with clear owners on the site and on the organic side, not a wish list.

- **It is honest and on-brand**, the wild-sloth and all-inclusive answers are true, which is exactly what the AI engines reward, and it fits the regenerative story.
- **It is measurable**, against a real baseline and an AI-answer scoreboard, to Alex's provability standard.

9. Status, sequence, and how we measure

ALREADY DONE

- Google Business Profile and Maps name corrected to Nayara Gardens.

DONE

- Gardens Search Console connected, so we have a real baseline.

DONE

IN PROGRESS

- Page FAQ, structure, and schema (Alex). Family-led metadata. Old-name corrections (Albert). Conversion-tag fix.

NEXT

- Family hub page; GBP menus and booking link; the all-inclusive answer and guide; the Instagram family and wildlife series; the Journal slate; the family round-up outreach; tracked non-brand paid.

How we will know it worked

- **The AEO/GEO scoreboard:** log four prompts ("best family resort in Arenal," "is Nayara Gardens good for families," "Nayara Gardens vs Springs," "best hot springs resort" for Springs) across ChatGPT, Perplexity, Gemini, and Google AI Overviews, before and after, recording whether each engine recommends, mentions, or omits Gardens and how it frames the audience.
 - **Search Console:** Gardens starts appearing for the family cluster (baseline today is effectively zero).
 - **The result that matters:** Gardens organic revenue closes the gap toward its siblings, from roughly one sixth of Springs today toward parity for its share of visitors.
-

Nayara Gardens complete digital game plan, June 2026. Figures are from live Google Analytics, Search Console, Semrush, Instagram, and Google Business Profile for the stated period. Items marked in progress or next are steps to ship and measure, proven against the baseline, not completed work.
